

Merlinus Liberatus. 7

B E I N G A N

ALMANACK

For the Year of our Redemption,

1 7 5 2.

1752 465

Being *Bissexile*, or *Leap-Year*.

And from the Creation of the World, according
to the best History, 5761.

And the 60th of our Deliverance by *K. William*.

from Popery, and Arbitrary Government.

But the 56th from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contain'd all Things sitting and useful for such a
Work, as an Ephemeris of the Daily Motion of the Planets,
with their Various Configurations, Aspects, Conjunctions,
Lunations, Eclipses, Astronomical, Astrological Meteorolo-
gical Observations, the Rising and Setting of the Sun, Moon,
Planets and fixed Stars, Illustrated with Tables of the Tides,
Terms, and Daily Equation of Clocks, Length and Break of
Day, &c. Also Philosophical Dissertations on the Compu-
tation of Time, Creation and Stellary Influence.

To which is prefix'd,

The Protestant Remembrancer, being an account of the Wick-
ed, Horrid, Popish Plots against the Protestants.

Calculated for the Meridian of *London*,

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 } { 32 }

By **JOHN PARTRIDGE.**

— *Etiam Mortuus Loquitur.*

LONDON Printed by *R. PHILLIPS*, for the
Company of **STATIONERS.**

PROLOGUE, or INTRODUCTION.

WHILE *Somnus's* entertaining Charms profound,
 Refresh'd my Limbs, and Fancy took her Round;
 Visionary Dream^s, my Quiet did molest,
 One more Surprizingly than all the rest.
 Methought I saw a mighty Angel bright,
 With pleasing Beams, that seem'd Seraphick Light:
 He spoke with Voice strange, and surprizing loud,
 Like *Jove's* stern Thunder broke from ambient Cloud.
Britains, awake, what Sleep, when Danger's near,
Rome's Engines are preparing every where;
 To extirpate the sam'd Protestant Line,
 Rouze, take Advice, ben't foolishly supine.
 Let Blessed Union be your Councils guide,
 All party Knaves disperse, lay them aside:
 Let *Britains* be with Toleration blest'd;
 Avoid Distinction, 'tis Religions Pest.
 That Jesuits heat, or Blindfold Zeal essay,
 That's late sprung up t'alude and you betray:
 Such Jackish Priests send o'er to Foreign Land,
 Where Fools obey, usurping Knaves command.
 Freed from that Crew, the *Romish* Power must cease,
 Nor will their Ghostly Cheats disturb your Peace.
 Protestants, now's the Time, Heaven's on your Side,
 The Jacks in Government must not preside,
 Nor o'er the honest Loyal Party ride. }
 Those Miscreants send them o'er the raging Main,
 And with their Perkin's in Succession Reign.
 From *Aaron's* Throne exclude the Bigot Priest, }
 Away with him, Religion he'll infect,
 With Jnggling Knacks, by Jesuits profess'd. }
 Church-men prefer that dare be bold and fight,
 For *William's* Revolution, *George's* Right.
 All perjurd Jacks, the Bane of Church and State,
 Wisely remove, and let them know their Fate:
 Their ill Success at *Culloden* lately try'd,
 Shews *Brunswick's* Mission to subdue their Pride;
 That *Britain's* Credit he'll once more restore,
 Make her Isle sound August as heretofore.
 Her Throne set on the Theatre of Fame,
 And give to Protestants immortal Name.
Britains arise, your Sleepy Courage wake,
 And *Rome's* sham Power, as with an Earthquake shake.

The Protestant Remembrancer continued.

Being an Account of the Horrid Popish Plots and Massacres, committed by the Papists upon the Protestants.

To Protestants its known what Horrid Ways,
The Papists Martyr'd them in *Marian Days*.
England was then a dismal Scene of Blood,
And run in Currents with a gory Flood.

THIS Persecution was so great, that in 5 Years Time they took in innocent Blood the Lives of 227 Persons. There Perished by those Flames, 5 Bishops, 21 Divines, 8 Gentlemen, 84 Artificers, 100 Husband Men, Servants and Labourers, 26 Wives, 20 Widows, 9 Virgins, 2 Boys, and 2 Infants, one sprung out of his Mothers Womb as she was Burning at the Stake, and was inhumanly thrown into the Fire again and Burnt for a young Heretick; besides these 64 was Prosecuted, 7 Whipt, 16 Perished in Prison, 12 was buried in the Dunghils, and many more was condemned, but was saved by the Death of that tyrant Queen, and happy entrance of Queen *Elizabeth*, who redeem'd the Nation from Popish Slavery and Tyranny, and maintained the Protestant Church in all its Rights and Privileges; this so irritated the blood thirsty Papists, that every two Popes thundred out Ecommunications against her, (and also sent a *Bull* to depose her) freeing her Subjects from their Allegiance, and threatening them with the Wrath of God if they did assist her, and promising rewards to all Persons who should lay Hands upon her, which was to be paid out of the Treasury of the Church, with full Pardon of all their Sins who should engage against her. But when these vile Popes and hellish Tribes saw that the Queen's Subjects were too faithful to engage in any such wicked Designs, they then proceeded to secret Plots and Conspiracies to take her Life. (which you may find related in my last) But all their Plots, &c. was by the Mercy of Heaven happily prevented. The Pope next stirs up *Philip* the II. King of *Spain* to invade *England* in 1588, that is to take Possession of it, for the Pope had bestowed it upon him, therefore with great and (as the Pope had Christned it *Invincible Armando*, consisting of 150 tall Ships, in which were 20,000 Soldiers, 8600 Seamen, 2000 Gally Slaves, besides Gentlemen Volunteers in abundance, so that there was scarce a Family in *Spain* but what had either a Son, Brother, or Cousin in the Fleet.

The rest in my next.

A Table of the Moon's Age every Day throughout this Year 1752. Whereby, with the Help of the next Tide Table, the Time of High Water at all those Places is shewed by Inspection.

The day after the 2 in this M. must be call'd the 1 and so on

Explanation of this, and the following Table.

Find the Month on the Head, and the Day in the First Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, which enter the following Table with it, and you have the Time of High Water at all the Places above mentioned.

Example. January the 10th, the Moon is five Days old, and over against 5 in this next Table or 20 you'll find 7 Hours, and on the Top, London, Timmoub, Hartlepool, &c. Which is the Time of High Water.

A general Tide Table, shewing the Time of High Water at all
the Places herein mentioned, 1712

Extend this Column with the Moon's Age, and over again if you have the Time of High Water at the Place above.

London. Finm. Harl. Stifford. Dort, Whitby. Galathea, Galathea. West of Ireland. Britain et Groin, Fatterd. and Robin H. B.

Down., Graves. Rank. Guernj. R.mn. Thant, Scilly bay
Tide, Seny H Zenn. at Blackn N. Cape, bet. Col and Dye

Plym. Ramsf. New Humb Foy, Terb. Newc. Palm. Dartm. Lizard, St Maloes, at the Spun, bet Scilly and the Lig.

Hull, Lynn, Weym. Fosh. Answ. St Dav. Hoine, of Brijo.
Lund. St Paul's Salcom. without Ulmont Waterfall Tide.

A Table of the Terms and their Returns, for this present Year, 1752.

Hillary Term begins Jan. 23. ends Feb. 12.

Returns, or Essoign Days.	Exc.	Ret.	Ap.	W D
In eight days of <i>St Hillary</i> , Jan. 20	21	22	23	Thur.
From the day of <i>St Hillary</i> in 15 days	27	28	29	Thur.
On the morr. of pur. of bl. V. <i>Mary</i> , Feb. 3	4	5	6	Thur.
In eight days of purification, of B. M.	9	10	11	Wed.

Easter Term begins April 15. ends May 11.

From the day of <i>Easter</i> in 15 days, April 12	13	14	15	Wed.
From the day of <i>Easter</i> in 3 weeks,	19	20	21	Wed.
From the day of <i>Easter</i> in one month,	26	27	28	Wed.
From the day of <i>Easter</i> in 5 weeks, May 3	4	5	6	Wed.
On the morr. of the <i>Ascen.</i>	8	9	10	Mon.

Trinity Term begins May 29. ends June 17.

On the morr. of the holy <i>Trinity</i> , May 25	26	27	29	Frid.
In 8 days of the holy <i>Trinity</i> ,	31	1	2	Wed.
From the day of holy <i>Trin.</i> in 15 days,	7	8	9	Wed.
From the day of holy <i>Trin.</i> in 3 weeks,	14	15	16	Wed.

Micbaelmas Term begins Nov. 9. ends Nov. 28.

On the morrow of <i>All-Souls</i> , Nov. 3	4	5	6	Mon.
On the morrow of <i>St Martin</i> ,	12	13	14	Wed.
In eight days of <i>St Martin</i> ,	18	19	20	Tuesf.
From the day of <i>St Martin</i> in 15 days,	25	26	27	Tuesf.

N. B. No Sittings in *Westminster-Hall* on *Ascension-day*, *Midsummer-day*, and the 2d of *February*.

The *Exchequer* opens eight Days before any Term begins, *Trinity* excepted, before which it opens but four Days.

Note, That the first and last Days of every Term are the Days of Appearance.

If any Purse-proud Knave on thee should fall,
Rather than go to Law, give Cloak and all.
The half-fac'd Christian talks of Gospel Rule,
But still Revenge pleaseth both Knave and Fool.
'Tis true the Law (they say) doth Mankind good,
But oftner Felt, than plainly Understood.

Partridge.

January 1752.

M	Jupiter	Venus
D	Sets.	Rises.

New Moon 5 Day, at 3 Afternoon.

First Quarter 13 Day at 3 in the Morn.

Full Moon 19 Day, at 7 at Night.

Last Quarter, 27 Day, at 6 in the Morn.

Rise at 5 Afternoon, & Sets at Midn.

Day, the 14 Day, and the Fog rise, 6 M.

February hath XXIX Days.

The Orbs and Stars, how stediatly they're hurl'd,
Those Arks where God hides Judgments from the World:
That shake its Pillars, yet themselves we find,
Beyond the Rage of Thunder, Storms and Wind.
For when the Almighty through these Trumpets call,
Poor tott'ring Man, he staggers and he falls.

April hath XXX Days:

Saturn and Mars, each other do oppose,
And are the Authors of most dreadful Woes.
These envious Stars such Decanats possess,
And points at Places I'm afraid to guess.
How that will be, Time must unveil not I,
For that will mention what I here lay by.

May hath XXXI Days.

Saturn and Jove confront each other's Rest,
 One Nature's States-man t' other her high Priest.
 They fall at odds; ay, let them Quarrel too;
 If Mankind suffer'd not for what they do.
 They move and scatter what they have in store,
 And snatch those Joy away, they gave before.

1	12						4 30	8N42	GREAT are the Expectations of the generality of People at this Time; some great Princes and Nations have been put in a Ferment, and it must not be expected they can fetle as yet: Besides the Quadrature of Saturn and Mars, Jupiter and Mercury are Aspects of a Virulent Nature, and will rather help to make the Breach wider, than assist in the composing the Differences, though there be some other Positions and Configurations that be fair towards so good a Design. And these are the * of ♄, ☉ and ♂, and the Conjunction of ☉ Venus and Mars. Solus Saniens divi.

in and throughout all His Majesty's Dominions and Countries in Europe, Asia, Africa and America, this Correction is to be observed and kept: That is, after the 2d Day of this Month, there be an Omission of 11 Nominal Days: and the next Natural Day succeeding the 2d Day must be called, reckoned, and numbred the 14th Day, and so on in Numerical Order as above. For the future the Civil Year is always to commence and begin on the First Day of *January*. And every 4th Year Bissextile as usual; except every 400 Years, of which only every fourth 100 Year is to be accounted a Bissextile; and first is to begin or be the Year 2000. This Correction brings the Equinoxes, Solstices, &c. &c. to the same Nominal Days and Order, as at the time of the said Council of Nice. And will continue so without any material Alteration for 4000 Years.

October hath XXXI Days.

Some Anxious Spirit would disturb the State,
By Faction Fury mak'it unfortunate;
But stay a while the Viper shows his Head,
And how by's ill hatch'd brood he was misled.
They use all Tricks to make a better Tale,
But Justice will not let the Knaves prevail.

31		2 12			

December hath XXXI Days.

Now *Sol's* swift Steeds their Annual Course have run,
And I this tedious Twelve-month's Task have done;
So long it shall not be, unless the Times,
And Fortune frown on my unpolish'd Rhimes:
E're I'll again *Urania's* Court Survey,
And next Years Actions to the World display.

No Night, but all Twilight.

PARTRIDGE, 1752.

I. *A Short Account concerning the Computation of Time.*

IN the last Sessions of Parliament the Regulation of some Errors and Defects in the *English* Calendar was not only the Topick of Conversation, but was honourably determined to make a Review, and Rectification of the same, and then establish it by Authority, which will greatly redound to the Honour of this Nation, and to an Uniformity of Style with our Neighbours; I shall here add a small Dissertation on Time and its several Computations, whereby the Reader may see the great Necessity there was of such a Review, and all Lovers of Order and Uniformity amongst us cannot but be glad and embrace such a Rectification.

The Nature of Time is of a Physical Consideration; and therefore Time is defined to be the Duration of Things, and the Parts of Time the Intervals of Succession of Phenomena; and the Idea we have thereof consists in the Order of successive Perceptions. This Definition agrees to Time absolutely consider'd; but Time in a relative Sense, is that which is measur'd or estimated by certain Motions, either equal, as Clocks, Watches, &c. or unequal, as of the *Sun* or other heavenly Bodies; and this is otherwise call'd Apparent or Vulgar Time.

The Original, Standard, or Integral Measure of Time is a Year, and this is the Space or Part of Time or Duration measured by one entire Revolution of some Cœlestial Body in its Orb, viz. the *Sun* or *Moon*, ergo the *Sun* and *Moon* are both natural and universal Measurers of Time, and were appointed from the Creation for Signs, and for Seasons.

The ancient and primitive Fathers always made use of them in regulating their Years, Months, &c. and setting their Times for performing religious Rites and Ceremonies. Their Years they reckon'd by the Revolution of the *Sun* to the same Point of the Heavens, as near as they could estimate; and their Months by the first Sight of the *Moon* after her Change. But these uncertain Ways soon brought them to a sensible Difference in the Beginning of their Times; to rectify these Errors they

PARTRIDGE, 1752.

either added or subtracted such a Number of Days as they supposed the Beginning of their Year or Month has deviated from. But this Way of rectifying their Time, proving very troublesome and uncertain, in order to remedy these Inconveniences, they began to make Observations on the Solar and Lunar Motions, to find out some common Measure or certain Space of Time, wherein they compleat some certain Number of Solar Revolutions, which also exactly containing some certain Number of Lunations ; that is if the *New Moon* be supposed to be on any Day in the Year, what Interval of Time there pass before it was again restored to the same Day.

From such Observations arose the Trieteris and the Octoeteris, the Endecaeteris and the Enneadecaeteris, or Metonic Cycle of 19 Years, the Solar Cycle of 28 Years, also the Period of *Calippus*, which is a System of 76 Years, as well Lunar as Solar, arising by the $\div$ of 19 by 4. The Period of *Hipparchus* of 304 Years, arising by $\div$ 76 by 4. The *Victorian* Period of 532 Years, arising by $\div$ 19 by 28. The *Gregorian* Period of 312 Years. The *Constantinopolitan* Period of 7980 *Julian* Years, and many others both ancient and modern, and all erroneous, for now it is well known that the Motions of the Luminaries are absolutely incommensurable, therefore it is an Impossibility to fix on any Cycle or Period without an Error in it, as hereafter will appear. The Civil Year was and is that in common Use among the several Nations of the World ; it is either Solar or Lunar, the Solar Year of 365 Days was used by the *Persians*, *Egyptians*, *Aethiopians*, each Month containing just 30 Days, but there was an Embolism of 5 Days added to each ; The *Syrians* use the same Number of Days, but their Months are equal to the *Julian*. The Lunar Year of 354 Days is used by the *Grecians*, *Turks*, and *Arabians*, as also the *Jews*, who in the Embolismic Year after *Adar*, they add the Month *Ve-Adar* of 30 Days, to equate it with the Solar Year.

The *Romans* also at first used this Embolismic Lunar Year, which was settled by *Romulus* their first King, but consisted only of 10 Months, or 304 Days, and thus coming short of the Lunar Year by 50 Days, and of the Solar by 61, this Year became vague and unfixed ; which *Numa Pompilius*, the second King, observing, added two other

PARTRIDGE, 1752.

other Months *January* and *February*, and thereby made the Year to consist of 12 Months, or 355 Days. But this Improvement being not sufficient to adequate the Year to the Motion of the *Sun* or *Moon*, and keep the Seasons even and steady, *Julius Cæsar* instituted the Civil Solar Year, by adding 10 Days to every common Year of *Numa's*, and one Day extraordinary to every fourth Year, which made it contain 366 Days, and was therefore called *Bissextile* or *Leap-Year*. Now this Intercalation of a *Bissextile* Day arose from the odd six Hours, for *Julius Cæsar* the Dictator had learn'd from the *Egyptians*, the nearest Tropical Solar Year contained 365 Days 6 Hours. He ordered the odd 6 Hours to be neglected till they made a Day, which happening every fourth Year, was to be inserted by Way of Intercalation after the *Terminalia*, which ended on the 23d Day of *February*, and the next Day being the *Sextus Kalendus Martii* was order'd to be reckoned twice (in *Latin*, *Bis Sextus Dies*) and thence came the Name *Bissextile* for *Leap-Year*. But in our Almanacks we add that intercalary Day at the End of the said Month. This therefore was ever since called the *Julian* Year or Account, and Old Style. (For this Reformation of the Kalendar was made in the 4668th of the Period, or the 46th Year before *C'rist*) which is at present used by us in *England*, and by all Protestant Countries, except those of *Holland* and *Germany*.

This Account is deficient, and not exactly true and just to the Motion of the *Sun*. For the *Julian* Year of 365 Days 6 Hours, exceeds the true Solar Tropical mean Year 365 Days 5 Hours 48 Min. 57 Sec. by 11 Min. 3 Sec. which Chronologers usually call the Civil *Præcession* of the Equinoxes. This Excess in 131 Years amounts to one Day; and in the Time of Pope *Gregory XIII.* was grown to 10 Days. The *Niëne* Council, A.D. 325, having fix'd *Easter* to the next Sunday after the Full Moon, which came next after the Vernal Equinox, which was then on the 20th of *March*, but in the Year of our Lord 1582. Pope *Gregory* observed, that the said Fault or Error of the *Julian* Year had cast the Equinoxes 10 Days, and the Full Moons 4 Days more backward than they were at the Time of the said Council (*viz.*) to the 11th of *March*, and 1st of *April*. Thus the great Feast of *Easter*, and consequently all other

moveable Feasts, became unfix'd, and attended with great Disorder. To remedy this the Pope ordered 10 Days to be taken from *October* that Year, that thus the Equinox might be reduced to the 21st of *March*; and to keep it there, order'd, that since in the *Julian* Account, every 100th Year is a *Bissextil*, and so 4 in 400 Years in the Ages to come, 3 of those 4 *Leap-Years* would be changed to common Years, and that only one 100th Year in every 4 Centuries should conclude with a *Bissextile*: This is call'd the *Gregorian* Account, or New Style, and is used by the Papists every where.

But even this *Gregorian* Emendation is not the strict Truth; and in process of Time doth prove very erroneous, so that it redounds very much to the Scandal of their Church, for it sometimes directs them to celebrate their *Pascha* with the *Jews* and *Quaterdecimans*, (which is against the express and principal Cannon of the Council of *Nice*.) For the 11 Min. 3 Sec. in 400 Years make 3 Days 1 Hour 40 Min. But the Pope not only neglected the 1 Hour 40 Min. (which in 14 Times 400 or 5600 Year, makes a Day within 40 Min.) but order'd, that only one 100th Year in every 4 Centuries should conclude with a *Bissextile*. So that here is an apparent Error of about two Days deficient in the New Style, or *Gregorian* Correction. But had the Pope order'd an Omission of an intercalary Day once in 132 Years, the Equinoxes would by that means be so well adjusted, as not to derogate above a Day therefrom in near 4000 Years: For the Lunar Cycle is deficient as well as the Solar, and falls short about 1 Hour 29 Min. which in 16 Decennoval Cycles amount to a Day: or more accurately in 310 Years and a half, the Lunations happen one entire Day sooner than this Cycle supposes, which since the Time of its Establishment amounts to betwixt 3 and 4 Days, to which add the Retrocession of the Equinox, makes the Derogation at this Time no less than 13 Days, viz. a Day in about 132 Years, as I before observ'd.

In short, there is no Cycle, no Period, which can be proved sufficient to regulate the Solar and Lunar Motions to an accurate, useful, and perpetual Agreement. In the Year 1700 the Protestant Princes in *Germany* and the North took a much better Method to fix their Times, than what the *Roman* Catholics, or any had done before them; for
they

P A R T R I D G E, 1752.

they rejected all Cyclean Computations, and introduced into their Calendar Astronomical Calculations from *Keplar's Rudolphine Tables*.

And seeing that Astronomy is so very much improved, by the indefatigable Industry and stupendous Labours of our modern Astronomers before all others, 'tis Pity that all such erroneous Cyclean Computations were not long since rejected, and true Astronomical Calculations introduced (in all our Computations of Time) which defines the Day and Hour of the Equinox more accurately, and also determines the Times of the *New* and *Full Moon* with great Truth and Exactness.

II. *Some Short Physical and Philosophical Considerations on the Creation and Stellar Influence.*

IN the first Chapter of the Holy Bible it is reveal'd, that God by his omnipotent Power created the World, and the innumerable Creatures. The same Chapter hath also reveal'd, that he created the Sun, Moon and Stars, to divide Light from Darknefs, and to be for signs and for Seasons, for Days and for Years.

This Revelation of Creation declares, the stupendous and omnipotent Power of the Creator. This Work of Creation hath employed the Thoughts of all wise Men, Philosophers and Divines, both ancient and modern. It hath fill'd them with sublime Cogitations, Speculations, and Admirations; which occasionally drew them into innumerable Searches and Inquiries into those Cœlestial Mansions, and from thence proceeded Variety of Opinions: As, Whether the Universe is not divided into Etherial and Sublunary? and, whether the Etherial Part be Substance or Matter, &c. And if the latter, Whether it is of the same Nature with that below? But that Opinion, that the Heavens are Substance, and not Matter, seems to have had the Preference. (For say they where ever there is Quantity, Figure, and local Motion, there must needs be Matter; for Quantity (say they) immediately follows the Nature of Matter, and cannot be in any Thing without it; and that all Forms and Accidents have no Quantity of themselves, but are said to be Quantity, because of the Quantity whereof they are.

From thence it hath been concluded, that the Ether i

P A R T R I D G E, 1752.

Substance is not Matter, but a pure penetrable and impenetrable Substance, of a different Nature from our Air; and according to *Aristotle*; this heavenly Etherial Being is so pure and uncorruptible, that no elemental Body can affect the same.

It was the Search after these Things, discovered the Motions, Revolutions, and Periods of the Heavens (*i. e.*) the fixed Stars, and wandering Planets; and that they moved thro' the fluid Body of the Etherial, by different Motions, Revolutions; and Periods, in a most wonderful, regular manner; but by what Power performed, was, and is still a Secret. As; whether by internal Power implanted in them by the Creator at their Creation, without external Impulse, or tangible Force? Or, whether by the immediate Power of God? These are Secrets which the wisest of mortals have not been able to discover. But it hath been discover'd, that the motions of the *Sun*, *Moon*, and other Planets are different; that they move in different Orbs, and make different Revolutions and Periods upon different Centers; and that several Axes are Excentric; and their motions divide Time, make different Days and Years, different Seasons and Weather.

It is very obvious to human Sense, that the *Sun*, *Moon* and *Stars* have extensive Light, and that Light is a most noble and wonderful Substance, most excellent, most simple; nothing amongst Bodies more beautiful, more sweet, more acceptable, more admirable, or more extensive.

It is also demonstrable, that the Effect of Light is Heat; and that by Heat all sublunary Things are cherish'd and enliven'd; and that without Light the Beauty of the World would be lost: It is the first and chiefest Image of the Wisdom, Beauty, Power and Goodness of the Infinite Being.

Heat is the immediate Power of the Almighty: It is the Life of the World; for without Heat the World would be at an End. Whenever it shall please the Almighty Preserver, to cause a Deprivation of Heat, that will immediately put an End to motion, and strike all Creatures dead.

Altho' the Essence of Light, and of the Stars, and their internal Form cannot be discovered; yet some of their Natures and Properties have been discovered, as Light,
Shine

P A R T R I D G E, 1752.

Shine, Heat, and other Influences ; that their *Lux Lumen* and *Radius* differ from one another ; that their different motions produce different Shine and Rays ; and that the Collision of their Shine and Rays produce Heat ; and that Heat extends itself to all Bodies, human and animal, and inanimate.

It is also discovered, that the Natures of the Planets are agreeable to the Nature of the Elements : some hot, others cold, some dry, others moist ; and that a Collision of their Rays produce different Mixtures ; from whence follows different Effects, according to the Nature of the most powerful Rays, homogeneous or heterogeneous, in respect of one another.

It hath been also discovered, that different Positions and Rays of the Planets, at the Time of human Births, have been attended with different Tempers in the Natives. According to the Mixtures of those Rays, the Motives and Tempers have been agreeable or disagreeable, happy or unhappy in mundane Affairs, Health and Sickness ; and that Heat, Cold, Drought, Moisture and Change of Weather, follow those Motions and Rays as certain as the Needle follows the Magnet.

That Air and Weather affects all sublunary Bodies in their natural State and Temper, is obvious ; and that the Humours in human Bodies are more replete or languid, and that a true Balance in human Bodies preserves them ; and that whenever the Strength of Nature cannot keep the Balance of human Bodies in an agreeable State, Sickness or Death follows.

If the Positions and Rays of the Planets affect human Bodies, it is manifest they will also affect the Faculties of Passion ; for nothing is more evident than that *Saturnian* Particles, or Humours abounding in human Bodies, do most certainly produce melancholly Thoughts and Actions ; and that *Martial* Humors abounding produce violent Passions, Fevers, &c. From a due Consideration of what hath been said, it may be concluded, that the Almighty Creator appointed the *Sun*, *Moon*, and *Stars* for Signs (if not Causes of future Events). This is agreeable to the Holy Bible, *Judges* v. 20. where it is said, *They fought from Heaven, the Stars in their Courses fought against Sisera !* also *Job* xxxviii. 31. *Canst thou bind the seasons Influences of the Pleiades, or loose the Bands of Orion ?*

Likewise,

PARTRIDGE, 1752.

Likewise the Production and Increase of all Vegetables are attributed to the Planets, Deut. xxxiii. 14. (*viz.*) *For the precious Fruits brought forth by the Sun, and for the precious Things put forth by the Moon.* But of this more in my next.

III. *Judicium Astrologicum, pro Anno, 1752.* Or, *an Astrological Judgment on the Influence of the Planets.* And

I. *Of the Brumal Ingress, or, Winter Quarter.*

IT hath been customary among Astronomical and Astrological annual Writers, to begin the Year at the same Moment of Time, that the *Sun* begins to return from the South Tropic: which according to the Astronomical Tables, happens on the 11th Day of *December*, at 50 Min. past 2 in the Morning, 1751; when the first Degree of *Scorpio* cut the Eastern Pinitor, and 10 Degrees of *Leo* possess the culminating Angle: At the Ingress I find the *Sun* Lord of the House of Honour, applying to the ☐ of *Mars* Lord of the Ascendant, and all the Planets *sub Terra*, except *Jupiter*, who is in the 8th House debilitated; the *Moon* is in the 4th House in 16 Deg. of ♊, separating from a ☐ of *Venus* and ♄ of *Saturn*, and her next applying is to the ☼ of the *Sun*. The Positions of the Planets at the Time of this Ingress, is of very remarkable Signification.

For so many Planets in the lower Hemisphere is very strange! *Latet Anguis in Herba!* What are the Jesuits and Priests doing in the Courts and Councils of some Princes? It may be truly said, their Government is the last of Curses that can fall on Princes and their People! Men of viperous and sordid Principles will be very active, to instil pernicious Councils into Princes and their Ministers, with View and Intention to undermine and defeat the good Councils, which good Ministers endeavour to set on Foot, and carry on for the Publick Good. This Quarter will be spent in very eminent Consultations and warm Debates in Councils, more than in Actions either by Sea or Land. The *Spaniards* are perplex'd with Fears and Jealousies, and not without great Cause: The *Persian* preparing Strength against a formidable Enemy. Some Princes in the East and North East will prepare Prelimina-

PARTRIDGE, 1752.

ries for some intended Treaty, which will be on the Anvil of the subtle Politicians, relating, partly to Trade and some greater Designs. It seems to point at the *Muscovites*, *Tartars*, and some *German Prince*. The *Sardinian King* is very assiduous in his Councils, and the chief End of his Design is to enlarge his Dominion. But most Part of the Business of Councils and Consults this Winter will tend to a View of Methods and Conduct for Success in the Summer. At the Time of this Ingress, there is one Thing worthy Notice, and that is the Position of *Mars*, the proper Significator of *Britain*, and that he is strong in an Astrological Sense; the Import of which is, that *Britain's* Governor and Government are above and beyond the Machination of their malignant Enemies. This is a melancholly Legend to *Jesuits*, *Jacobites*, *Non-Conformists* and *Demi-Jacobites*. Some Enquiry after Monies and Treasures is portended, and some Treasurers or Cashiers will be call'd to Account and found deficient. But Money will procure a Diversion of Prosecution. The Prudence or Veracity of some Ambassador or Plenipotentiary, in Danger of being brought into publick View. The positions of this Ingress give us Warning both of external and internal plots, and further Designs against the Government and Nation, but with no Success, but assur'd Confusion and Destruction attends them and their Associates.

*Thus doth the Stars Influence forebode,
What 'tis our Enemies are about to do.
But if they any further Progress make
To gain their End, 'twill prove a dark Mistake.
But welcome better Times in these our Days,
For which to God give Honour, Thanks and Praise.*

Impius tantum metuit, quantum nocuit.

IV. Of the Spring Quarter.

THIS *Vernal* Quarter begins when the Earth in reality enters the first Punctum of the Equinoxial Sign *Libris* and the *Sun*, according to Appearance possess the opposite Point of the Heavens; namely, the first Point of *Aries*, either Way taken, happen this Year, upon the 9th Day of *March*, at 43 min. after 4 in the Morn. Apparent Time. The *Sun* has now neither Declination, Amplitude, nor right Ascension; his Meridian Altitude at *London*, is 38 deg. 28 min. equal to the Distance

PARTRIDGE, 1752.

tance of the *Zenith* from the *Artic Pole*, but at *Berwick upon Tweed*, it is 34 deg. 10 min. and at *Paris* 41 deg. 9 min. The Days and Nights are now equal all the World over, except within the Polar Circles: For in the Latitude of 66 deg. 31 min. North, when the first Scruple of *Aries* ascends, the *Ecliptick* lies parallel to the *Horizon*; but when *Libra* ascends, the *Altitude* of the *Nonagesima Degree* is equal to the *Distance* of the two *Tropicks*, viz. 46 deg. 58 min. but when the same Signs possess the *Western Angle*, then the *Position* of the *Ecliptick* is changed, as in the same Latitude South. See Mr. *Leadbeater's Uranoscopia* and the 2d Edition of his *Astronomy*. In my Discourse on the *Computation of Time*, I intimated, that *Astronomical Calculations* was the only Way to determine the *Time* of the *Equinoxes*, &c. which I shall here elucidate by two practical Examples of the *Vernal Equinox*, or the *Sun* entering the Sign *Aries*, from the genuine *Tables* of Dr. *Edmund Halley*, one for the Year before *Christ*, the other for the present Year 1752; whereby, in the clearest manner is shew'd, how much the *Julian Year* varies from the *Truth*, and what the *Gregorian Style* wants of being perfect.

Year before Christ	S	o	i	''	S	o	i	''	A. D. 1752.
F. L. ☉s Ingress to ♈	12	0	0	0	2	0	0	0	Mean or

Minutes 55'		2	22			2	3		Minutes 50'
Seconds 49''			2				2		Seconds 49''

By the preeceeding Computation, the Equinox was on the 22d Day of *March*, at 5 hours 55 min. *post Meridian*, or *Afternoon*, the Year preeceeding *Christ's Nativity*, which was a *Biffexfile*; and in this Year 52. it happen on the 8th Day of *March*, at 16 hours 15 min. *post Meridia*,
the

PARTRIDGE, 1752.

the Difference is 13 days, 13 hours, 40 min. and so much has been the Retrocession of the Equinox since that Time. Also, on the first Year of *Christ*, the Equinox was on the 22d Day, at 11 hours, 44 min. *post Meridia*; the 2d Year, at 17 hours 33 min. the 3d Year at 23 h. 22 min. and on the 4th or 1st Bissextile Year after *Christ*, it was at 5 hours 11 min. in the Afternoon the same Day, Varying every Year forwards 5 hours, 49 min. or thereabouts; and differing from the *Julian* 6 hours, upwards of 11 min. which in every 130 Years, amounts to 1 day.

Thus, upon the whole, it plainly appears, that we are deficient, (or too backward) 13 Days, and the *Gregorian* 2 Days, computing from the Birth of *Christ* the most proper Radix.

Astrological Judgment on the Vernal or Spring Quarter, and a summary View of the whole Year.

AT the Time of this Ingress, 13 Degrees of ♄ culminates, 19 deg of ♊ ascends, all the Planets are *subterra*, except ♈ in 10th the ☽ Defluxes from a ☐ of ♀ & conjoins with ♄ and then ♃. At this *Vernal* Lunation 28 deg. of ♈ is culminant, and the 9th deg. of ♀ possess the Orient Angle; all the Planets are in a subterranean Position, except ♃ and ♄ in the Occidental Angle; the Luminaries are in Quadrature to ♈ and in * to ♃ and ♃ applying. The Positions and Configurations of the Planets at the Time of this Ingress and Lunation, will be followed with remarkable Accidents and Proceedings.

*Things do appear most strangely in the World,
Some Nations rise, and some are over-bur'd.*

We may expect to hear of great Discontents, Depressions and Impediments in Publick Affairs, Murmurings and Insurrections amongst the common People, Robberies, Thefts, Plundering and Rapes. Pestilent Seditions and various Infirmities; New Religions, new Governments, new Laws, new Customs; great and tremendous will be the Transactions this Year, in several Parts of *Europe*. The morbid Effluvioms of these Rays, seems to point at *Persia*, *Turkey* in *Europe*, *Misna*, *Arabia*, *Fælix*, *Moravia*, *Sclavonia*, *Dalmatia*. *Spain*, *Italy*, *Hungary*, *Lombardy*, *Flanders*, &c. The German and *Roman* Empires greatly molested by Divisions, Schisms, and pernicious Councils, which threatens hostile Actions.

The

PARTRIDGE, 1752.

The tedious Transit of h in t , and in p & both u and z in u is of a malevolent Import to those Kingdoms and Cities passive to those Constellations, as *Sardinia Flanders*, the West and South West of *France* and *England*, *Paris*, *London*, *Nuremberg*, &c. these, and many other Places in *Europe*, will in some Measure feel the Smart of their dire Influences. *Si Saturnus fuerit in Sagittario, & fuerit Latitudo ejus septentrionalis, significat multitudinem aquarum fortium & frigus Hyemis*; saith *Bonatus*. (That is) If *Saturn* be in *Sagittary*, and have North Latitude, it signifieth Floods and abundance of Waters, and cold Winter or intemperate Seasons; Witness the Truth of this Aphorism in the Winter and Spring 1751.

*This angry Star hath a long Transit made,
And in still Silence wraps up his Design,
Courts the Cœlestials in the Cavalcade,
His Influence distempereth our Clime;
And introduce Mortality's dire Doom,
And make us fear worse Days are yet to come.*

The Mile Aspects of the Superiors whenever they happen, have always been attended with imminent and stupendious Effects, on the Macrocosm as well as the Microcosm: Those that are curious that Way, may read *Dr. Goad's Astrometeorologica* and find ample Satisfaction, for my Room will not permit to insert a Chronological Diary of such remarkable Occurrences. The present Aspects under Consideration will shew their Effects, in this and some succeeding Years.

*The Heavens disturbed by their dire Influence,
Cause Exaltations and Contagious Air,
With sudden Condensations; and from hence
Oft changing Weather, that brings almost Despair
To the Countryman: And truly 'tis a Wonder,
If we have not much Lightning, Rain and Thunder.*

The Aspects import no Good to the Merchants of *England's* Metropolis, they will probably suffer some Loss by the turbulent proud Temper of some of their Brethren, as well as by Pyrates and impetuous Storms at Sea; but the Prudent Conduct, and timely Care of the Government, will in a great Measure meliorate those Misfortunes. For *Mars* in g with *Jupiter* and in Mundane Δ of *Venus*, and $\times$ to the Luminaries, is of a benevolent im-

port

PARTRIDGE, 1752.

port to *Britons*, and their potent Governor. They smile on the whole *British* Dominions, which, I hope, will alleviate the other Male Configurations, that is, the low'r Influence of *Saturn's* δ s to *London's* Radix and Planets transiting the same.

*Here is a Complication, good and bad,
Better and worse, both will be seen and had.
From the Cœlestial Pow'rs doth appear,
Both Peace, and Love, and Enmity I fear.
May the Good increase, and the Evil be suppress't,
And then all Things will happen for the Best.*

V. Of the Summer Quarter.

THIS *Æstival* Quarter begins when the Sun apparently enters the first Scruple of *Cancer*, which happens this Year on *Wednesday* the 10th Day of *June*, at 42 min. past 3 in the Morning, when 23° of *Aquarius* is culminating, and the 29 deg. of the *Twins* ascending, *Saturn* is in the 6th House Retrograde; *Jupiter* near the Degree ascending, *Venus* and *Mercury* in the 12th, *Mars* in the 3d, the *Sun* in the Ascendant, and the *Moon* in the 5th, disposed of by φ , and separating from a Δ of ψ and applying to the Δ of $\odot$ and $\square$ of δ . Thus do the Heavens behold us at the Time of this Ingress. The Transactions of this Quarter, will be mostly of the Nature of *Saturn*, as aspected and posited, by being Retrograde. Matters and Things go backwards, for saith Dr. Dee, Aphor. 88, *Planeta Retrogradus Natura constans decretum, quodam m.do perficiere videtur, periodem summa diurnam breviori absolvendo Tempore quam ipse Equator, &c.* Sullen and froward Tempers will excite Men into evil Actions, Complaints and Contests about Law, Customs and Religions, by Men professing Religion; some new Opinions, Schism or Religious Controversies seems to be on the Anvil of Innovation; a wicked and pernicious Design discovered and frustrated to the Surprise of the Projectors. Some untoward contagious Distempers hath, or will arise, as well as Heats and Disputes, if not Fires in *London*, (*Sed Deus avertat*) Also some Fevers and Small-pox, or contagious Distemper may happen in the West and South-West Parts. But in general, a good State seems to attend the *British* Monarch's Dominions, and whose

Council

P A R T R I D G E, 1752.

Council will be prevalent in the grand Actions of Europe.
*Great Things appear, 'tis Time prepares the Way,
And by such Hands as bears triumphant Sway.
England, enjoy with Thanks, thy blessed State,
Learn to be good, then wilt thou be more Great.
Act no unworthy thing, but always be
Found to promote Peace, Love, and Loyalty.*

VI. Of the Autumnal Quarter.

THIS Quarter begins on Friday the 22d Day of September, at 5 hours 14 min. past Noon, when 19 Deg. of Sagittary (the Place of Saturn) possels the Mid-heaven, and 2 Deg. of Pisces is orient; the Planets are all angular except ♄. The ☉ ♀ ☿ and ☿ in the 7th House; the Moon in the Ascendant separating from a ☐ of ♄ and applying to the ☐ of ☿. At the Lunation the ☾ is in Opposition to ☿, and applying to the ☐ ☉, ♀ and ☿. These are unfortunate Positions, and very angry Rays, both at the Ingress and Lunation, and will eminently shew their Effects in remarkable Occurrences, both in the animal and vegetable World.

*May Foreign Parts this tragic Story tell,
And Peace attend this Nation where we dwell.
Whate'er Event seems now for to appear,
I'll not presume such Influx to declare;
Or where their great Effects are like to fall,
For GOD alone, Rules and Disposes All.*

VII. Upon the ECLIPSES.

THIS Year affords only two Eclipses, and both of the greater Luminary the Sun, and invisible to these European Kingdoms; they happen in the following Order: The first is on Saturday the 2d Day of May, at 6 in the Evening; this will be a great and visible Eclipse on the North West Part of the Globe. The second is on Monday the 6th Day of November, at 2 in the Morn'g this will be a central and visible on the East Part of the Globe, in the Meridian 150° from London, under 40° N. Latitude.
